EDUCATION

Sepuluh Nopember Institute of Technology
Informatics Engineering Bachelor
GPA: 3.67/4.00

Surabaya, Indonesia
August 2024 - Present

EXPERIENCE

HMTI Profile Website (Flexoo Project) | Backend and DevOps Engineering Remote | January 2026 - April 2026

- **Backend API Development:** Engineered a RESTful API for the HMTI organization portal utilizing Golang, the Gin framework, and GORM connected to a PostgreSQL database.
- **Infrastructure Containerization:** Authored multi-stage Dockerfiles transitioning from an Alpine builder to a highly secure, lightweight Distroless Debian base image for production.
- **Environment Orchestration:** Configured distinct docker-compose environments for development and production, implementing database health checks, persistent volume mounting, and isolated container networks.

ITS Attendance System | Critical Vulnerability Identification Sepuluh Nopember Institute of Technology (ITS) | April 2026

- Identified and responsibly reported critical security vulnerabilities in the ITS attendance system (presensi.its.ac.id).
- Received formal recognition from the Directorate of Information Technology & Information Systems Development (DPTSI ITS) for the security findings.

SKILLS

Programming Languages: Go, Python, Java
Libraries/Frameworks: JavaScript, Gin, React, FastAPI
Tools / Platforms: Git, Github Action, Jenkins, SonarQube, Cloudflare
Databases: PostgreSQL, MySQL

PROJECTS / OPEN-SOURCE

CollabBoard | Link *Python, JavaScript (HTML5 Canvas), Redis, SQL, Docker, Nginx, GitHub Actions*

- **Real-Time Whiteboard Development:** Built an interactive, collaborative whiteboard application featuring live canvas drawing, geometry processing, multi-step undo capabilities, and real-time cursor tracking.
- **Distributed System Architecture:** Architected a Python-based distributed system to handle real-time state synchronization, room management, and concurrent user connections, utilizing Redis Pub/Sub for low-latency data broadcasting.
- **Infrastructure & Deployment:** Containerized the full-stack environment using Docker and Docker Compose, and configured Nginx as a reverse proxy for reliable traffic routing.
- **CI/CD Pipeline:** Automated the deployment workflow by implementing GitHub Actions alongside custom remote deployment shell scripts.

PusingBerat (SIEM Platform) | Link *Golang, WebSockets, Python, Docker, Jenkins, Nginx, SonarQube*

- **SIEM Backend Architecture:** Engineered the core backend for a Security Information and Event Management (SIEM) system using Golang.
- **Log Parsing & Rule Engine:** Developed custom data parsers for Nginx and Syslog. Built an internal rule engine that evaluates YAML-based security rules to detect threats such as SSH brute force attacks, excessive failed logins, and sudo failures.
- **Real-Time Monitoring & Alerts:** Implemented WebSocket hubs and clients for live event streaming, alongside an alert dispatcher service featuring direct Discord notification integration.
- **API Design:** Structured and documented comprehensive REST APIs for managing Alerts, Events, Log Sources, Rules, and system Statistics, utilizing Bruno for API collection testing.

- **CI/CD & Quality Assurance:** Architected automated continuous integration and deployment pipelines using Jenkins and enforced code quality standards using SonarQube.
- **Infrastructure & Containerization:** Authored multi-environment Dockerfiles and Docker Compose configurations to containerize the Golang API and a supplementary Python/Flask frontend server.
- **Server Configuration & Automation:** Configured Nginx for reverse proxy routing and wrote Bash scripts to automate routine operations, including remote deployments and database backups.

Luca (Discord Bot) | [Link](#)

Node.js, JavaScript

- Developed and deployed a multipurpose Discord bot that actively manages and serves a community of over 1,000 members.
- Built a comprehensive moderation suite handling automated warnings, tiered escalations, timeouts, kicks, and bans.
- Engineered dynamic voice channel management features, including interactive UI panels for user-specific room configurations and music bot controls.
- Architected a scalable codebase utilizing modular command routing, event handlers, and dedicated database repositories for state management.

CERTIFICATIONS

- Critical Vulnerability Identification ITS Attendance System - **Directorate Of Information Technology And System Development Sepuluh Nopember Institute Of Technology (ITS)**

HONORS & AWARDS

- Attained the elite "Mythical Immortal" rank in Mobile Legends
